

About Us

Wednesday, 06 January 2010 02:12 - Last Updated Thursday, 06 December 2012 21:32

The International QSAR Foundation is an ad hoc collaboration of scientists committed to the goal of developing QSAR methods for long-term adverse outcomes such as reproductive impairment, developmental toxicity, and carcinogenicity. The organization expects to coordinate contributors through the specialized social media capabilities of Effectopedia. If you wish to join our effort, contact Gilman Veith or Hristo Aladjov as shown below:

Gilman D. Veith, Co-Chair
